 Re: System Update to WRS Health

The WRS Health Team performed an important ICD-10 related update to the System on September 27, 2015. This release includes the following functionality:

ICD-10 Transition

ICD-10 goes into effect this week on Thursday, October 1, 2015. In order to assist our clients during this transition, WRS has performed a process that will enable providers to transition more efficiently to ICD-10 Coding.

ICD-10 Uptime Note

You will notice that new note now appears in all patient charts under **EMR ALL NOTES**. This ICD-10 Uptime Note is meant to serve as a tool during ICD-10 coding transition. It is not a new note format and/or an actual new note in your patient’s charts. This announcement is being made to make users aware of this new tool. No direct action is needed.

EMR Notes (Current Practice: 45 / Other Practices: 0)						
DATE		TYPE OF NOTE	SIGNATURE	ASSESSMENT	DROP	FAX
Sep 26, 2015		ICD-10 UPCODE NOTE	unsigned	ANXIETY STATE UNSPECIFIED (F41.9) ANXIETY STATE UNSPECIFIED (300.00) Family history of malignant neoplasm, ovary (Z80.41) Family history of malignant neoplasm, ovary (V16.41)	Drop	<input type="checkbox"/>
Sep 25, 2015		Visit Note II	unsigned	ANXIETY STATE UNSPECIFIED (300.00) Family history of malignant neoplasm, ovary (V16.41)	Drop	<input type="checkbox"/>

Figure 1: EMR> EMR Notes >ICD-10 Uptime Note

ICD-10 Coding Content

You will notice that the new ICD-10 Upcode Note includes both the ICD-9 codes (from the previous note) and all corresponding mapped ICD-10 codes. The content from the previous ICD-9 Plan (free text) will also map to the **Plan** of the corresponding ICD-10 code. Also, any **DEFAULT** "Plan Content" will carry forward to the corresponding ICD-10 codes, per provider, when added to a note.

All subsequent notes created in your practice for that patient (by using either **Move to Exam Room** or **Create New Note**) will now include all the Assessment content that is displayed in the ICD-10 Upcode Note.

Unmapped ICD-10 Content

There may be instances where no ICD-10 coding is transferred. This will be the case when ICD-9 coded diagnoses do not have exact match to an ICD-10 Code, per [CMS General Equivalency Mapping](#). In those instances, the provider will be required to search for and add the appropriate ICD-10 Code to the note.

CURRENT NOTE ASSESSMENTS							Save	Delete	Print

ADD PROBLEM

Hold Ctrl key to Select Multiple Problems

FEVER

- Sandfly fever [A93.1]
- Colorado tick fever [A93.2]
- Other specified arthropod-borne viral fevers [A93.8]
- Unspecified arthropod-borne viral fever [A94]
- Unspecified arthropod-borne viral fever [A94.0]
- Sylvatic yellow fever [A95.0]
- Urban yellow fever [A95.1]

+ Add to Current Note Assessments

Figure 5: EMR> Current Note Assessments >Search for ICD-10 Code

If there is no **ICD-10 Uptime Note** under a patient's **EMR ALL NOTES**, it means that this patient has no prior notes created that contain existing ICD codes.

Figure 6: EMR> Search Patient Notes>EMR Note>Assessment

The ICD-10 Upcode Note is meant only to be used as a tool during transition from ICD-9 to ICD-10 Code. It will not directly populate the **Create Claims Queue** or appear under **EMR Current Charts**. The data contained in this note is also not counted toward Meaningful Use Reporting data.

Claims Submitted Before October 1

All notes submitted between September 27 and September 29 with have both ICD-9 and ICD-10 codes. It is advised that each billing department review these claims to ensure the ICD-10 codes are not populating the claim.
