Re: System Update to Waiting Room Solutions

The WRS Development Team will be performing a software upgrade to the Waiting Room Solutions System on November 4, 2015. The updated system will include following enhancements to the checkout process as related to PDR functionality. These have been designed to improve overall functionality, efficiency and usability.

Physician's Desk Reference Company (PDR) is an industry leader that offers information and discounts on select medications as a valuable service to providers and their patients. Original PDR functionality was added to WRS Health in 2013. This functionality has been further enhanced in this release.

Automated Meaningful Use Compliant Patient Information

Practice staff and providers can now gain easier access to valuable medication information and money-saving offers during the patient checkout process. This drug information also meets requirements for Meaningful Use Patient Educational Content and is counted as part of your MU report values.

Easy Access to Drug Instructions & Discounts at Checkout

Note that this information is available for only a select list of medications. When an applicable drug has been prescribed during an encounter, the **Print Rx Materials** window will now automatically open at Checkout. Discount offers and medication information will then be displayed for easy printing and distribution to the patient.
